PROFESSIONAL SUMMARY

Versatile and results-driven data professional with 5+ years of progressive experience across data engineering, data science, and analytics. Proven expertise in designing scalable data architectures, developing end-to-end ML pipelines, and optimizing large-scale data systems in cloud environments. Proficient at combining statistical modeling, machine learning, and advanced data engineering to deliver actionable insights and build production-ready solutions. Experienced in stakeholder collaboration and leading cross-functional projects in fast-paced environments.

TECHNICAL SKILLS

Data Science & Machine Learning: Supervised & Unsupervised Learning • Deep Learning • Model Evaluation & Optimization • Predictive Modeling • Time Series Forecasting • MLOps

Data Engineering & Architecture: ETL/ELT Pipelines • Data Warehousing • Orchestration & Workflow Automation • Distributed Computing • Stream & Batch Processing • Data Modeling & Quality

Natural Language Processing & GenAI: Text Analytics • Named Entity Recognition (NER) • Recommendation Systems • Large Language Models (LLMs) • Generative AI • Retrieval-Augmented Generation (RAG)

Analytics & Business Intelligence: Statistical Analysis • A/B Testing • KPI Tracking • Dashboard Development • Data Visualization • Customer Segmentation • Experimentation

Databases & Query Languages: SQL (PostgreSQL, MySQL) • NoSQL (MongoDB, DynamoDB, Redis) • Data Warehousing Solutions (Snowflake, BigQuery, Redshift)

Cloud & Ops: AWS • GCP • Docker • Git • CI/CD • Infrastructure as Code (Terraform) • Monitoring & Logging

Programming & Tools: Python • SQL • R • Bash • Power BI • Tableau • GitHub

Soft Skills: Stakeholder Communication • Data Storytelling • Strategic Thinking & Problem-Solving • Agile Collaboration • Leadership & Mentoring • Documentation & Reporting

EXPERIENCE

Deloitte

January 2026 – Present

Consultant Data Engineer, Power Industry Customer Enumeration Programme

- Designed and built the end-to-end enumeration data pipeline (mobile app source, FastAPI ingestion layer, Apache NiFi orchestration, PostgreSQL) processing hundreds of thousands of customer records across nine local government areas.
- Implemented FastAPI ingestion endpoints with Pydantic and JSON schema validation, authentication and authorization, structured error handling, and idempotency safeguards; configured NiFi flows for validation, enrichment, routing, back-pressure, retries, dead-letter handling, and provenance tracking.
- Established a data quality framework with automated checks (mandatory fields, GPS coordinate accuracy, duplicate detection, customer-asset linkage, meter number format), quality scorecards, and a metadata catalog, plus CI/CD using Git, Docker, and automated unit, integration, and data-quality tests.
- Developed a commercial-loss KPI framework and interpretable ML models (revenue-at-risk estimation, billing and consumption anomaly detection) to surface revenue leakage and produce ranked intervention lists for operational targeting.

Consultant AI Engineer, Digital Youth Engagement Study

- Supported the data acquisition and analytics workstreams of a mixed-methods study assessing youth digital engagement across six geopolitical zones.
- Built data acquisition pipelines using social media platform APIs and ethical web scraping, applying anonymization and aggregation to protect personally identifiable information in line with child-protection standards and the NDPR.
- Applied NLP and machine learning models (sentiment analysis, text classification, trend forecasting) to characterize engagement patterns and behavioural drivers across gender, age cohort, and urban or rural segments.
- Developed a Retrieval-Augmented Generation (RAG) chat assistant over the study knowledge base, allowing stakeholders to query findings and explore insights interactively, and conducted comparative API pricing research to inform tooling and data-acquisition decisions.

Qlozet AI

January 2025 – December 2025

Consultant Machine Learning Engineer

- Led development of an AI-powered 3D body measurement system, integrating MediaPipe, OpenPose, and custom depth estimation pipelines for real-time inference, improving accuracy by 25%.
- Designed and trained convolutional neural networks (CNNs) for landmark refinement and anomaly correction, implemented feature scaling to support continuous learning with new scan data, improving model robustness.
- Built robust MLOps pipelines for data ingestion, model retraining, and evaluation, ensuring scalable and reproducible workflows across mobile and web platforms.
- Optimized the platform for mobile deployment, with inference benchmarks tailored for edge devices and offloaded computation to cloud functions.
- Engineered and deployed a scalable recommendation system for personalized clothing suggestions using collaborative filtering and demographic-based hybrid models, improving customer engagement by 18%.
- Developed a robust AI agent using LLM APIs and retrieval-augmented generation (RAG) to provide personalized user guidance during the scanning process, reducing dropout rates by 20%.
- Oversaw internal model versioning, experiment tracking, and real-time feedback loops for continuous learning using custom logging and feedback pipelines.

APIN Medical Laboratory and Diagnostics Center

October 2022 – December 2024

Data Analyst / Data Engineer

- Led data-driven process optimization, reducing reporting errors by 25% and improving patient care by implementing anomaly detection algorithms to flag irregular test results.
- Built and deployed automated ETL pipelines for the Laboratory Information Management System (LIMS), reducing latency by 35% and enabling real-time analytics.
- Designed a centralized data warehouse schema, engineered Power BI dashboards, integrating DAX calculations, row-level security, and automated refresh schedules, enhancing real-time monitoring of lab performance, increasing operational efficiency by 20% and supporting better decision-making.
- Conducted statistical analyses to compare diagnostic test performances and collaborated with medical professionals to deliver predictive reports on diagnostic performance, improving accuracy metrics by 15%.
- Implemented robust data validation layers using Python and SQL constraints to ensure end-to-end data integrity, reducing errors by 40%.

LUCSD

September 2021 – September 2022

Machine Learning Researcher

- Developed a Heart Disease Prediction System using Random Forest and Logistic Regression, leveraging hyperparameter optimization, and achieving ~93% score across evaluation metrics.
- Built modular ML training pipelines with extensive use of feature selection, model stacking, and PCA, improving model interpretability and performance.
- Designed a reusable data preprocessing pipeline for categorical encoding, imputation, and outlier handling across projects.

Data Analyst

- Automated data collection and transformation workflows using Python (Pandas, NumPy) and SQL, reducing manual reporting time by 30%.
 - Built interactive public health dashboards in Power BI, integrating data from EHR systems and external health databases.
 - Performed geospatial analysis to map disease prevalence, helping to optimize targeted resource allocation.
 - Implemented A/B testing to evaluate intervention strategies, leading to a 12% improvement in patient outcomes.
-

CERTIFICATIONS

- DataCamp: [Data Scientist](#) • [Associate Data Scientist](#) • [Professional Data Analyst](#) • [Associate Data Analyst](#) • [SQL Analyst](#) • [Power BI Analyst](#)
- Google: [Data Analytics Certificate](#)
- Microsoft: [PL-900 - Microsoft Power Platform](#)

EDUCATION

University of East London
MSc Data Science

Landmark University
BSc Computer Science

VOLUNTEERING

HNG Tech

January 2025 – Present

Data Analysis Mentor

- Guiding and supporting data analysis interns, providing insights into advanced analytics techniques and tools.
- Support mentees in developing technical skills, problem-solving approaches, and career development.

Youth Employ and Development Initiative

January 2024 – Present

Lead Technology and Innovation Officer

- Direct the design and implementation of data-driven systems that optimize program delivery and performance tracking.
- Lead digital transformation initiatives, integrating automation and analytics tools to improve decision-making and efficiency.
- Collaborate cross-functionally to identify innovative solutions that enhance youth empowerment outcomes and organizational impact.
- Provide technical leadership in adopting emerging technologies that strengthen communication, monitoring, and reporting frameworks.
